

VISTA ZONE

SHAPING RESILIENT INFRASTRUCTURE
FOR A SUSTAINABLE FUTURE

Shaping resilient infrastructure
for a sustainable future.

COMPANY OVERVIEW

We are a multidisciplinary engineering and industrial services company specializing in Mining Services, HVAC Solutions, NDT Testing, Automation, Engineering Services, and Construction. With a commitment to innovation, safety, and quality, we deliver integrated solutions that empower industries to operate efficiently, sustainably, and profitably

Our legacy is built on completing complex projects on time and within budget, making us a trusted partner for governments, private investors, and Mining.

- **Consistent Growth**

- **Proven Portfolio**

- **Trusted Reputation**

VISION

Our vision is to redefine infrastructure through sustainable and innovative engineering practices that create lasting value for communities and stakeholders. We aim to go beyond construction and contribute to the transformation of urban and industrial landscapes.

MISSION

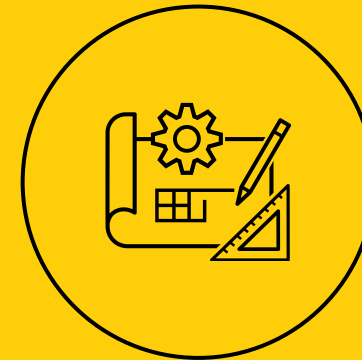

Our mission is rooted in safety, reliability, and quality. By integrating advanced technology with proven expertise, we are committed to delivering projects that meet global standards and align with the evolving needs of society.

CORE SERVICES

»» ENGINEERING

We offer a wide range of engineering services that cover design, planning, execution, and project management, ensuring seamless delivery at every stage.

Our expertise extends from large-scale infrastructure projects to specialized structural solutions, making us adaptable to different client needs.

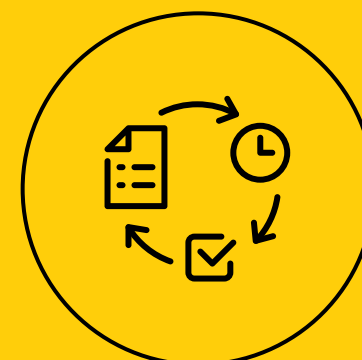

Design & Planning

Comprehensive blueprint development with advanced modeling.

Construction & Execution

On-site delivery with safety and precision.

Project Management

Streamlined coordination of schedules, budgets, and resources.

»» AUTOMATION

Our Control Systems and Automation division provides end-to-end industrial automation and digitalisation solutions for the mining, energy, utilities, and process industries.

We focus on enhancing plant reliability, operational efficiency, safety, and digital visibility through robust engineering design, high-quality workmanship, and modern automation technologies.

Automation, Control Systems & Instrumentation Engineering Services

Our control systems and instrumentation engineering capability covers the full lifecycle of automation projects—from concept design and engineering to commissioning and long-term support.

We employ the skills of our professionals to undertake:

- Brownfields PLC, DCS, HMI, and SCADA system design and integration across platforms such as Siemens, Rockwell, Schneider, Emerson, and Yokogawa
- Field instrumentation specification, installation, calibration, maintenance, and loop testing
- System upgrades, migrations, expansions, and modernisation of legacy control systems
- Control cabinet/panel refurbishments, rewiring, and component replacement
- Power distribution, protection, earthing, and termination enhancements
- Development of control philosophies, functional design specifications, and loop designs
- Industrial communication network design and configuration (Ethernet/IP, Profinet, Profibus, Modbus, OPC)
- OT network assessments and cybersecurity implementation aligned with ISA/IEC 62443 security principles

»» NDT TESTING

Non-Destructive Testing (NDT) refers to inspection and evaluation techniques used to examine materials, components, or systems without damaging them. NDT helps identify defects, measure properties, and ensure reliability while keeping equipment and structures operational.

- Ultrasonic, radiographic, magnetic particle, and dye penetrant testing
- Structural integrity assessments
- Compliance with international quality standards

»» HVAC (HEATING, VENTILATION & AIR CONDITIONING)

We provide comprehensive HVAC solutions, including system design, installation, maintenance, and optimisation for industrial, commercial, and mining facilities. Our services ensure reliable climate control, improved energy efficiency, enhanced indoor air quality, and seamless integration with modern building management systems.

OUR HVAC SERVICES:

- Design, installation, and maintenance of HVAC systems
- Energy-efficient climate control solutions
- Industrial and commercial ventilation systems

TECHNOLOGY & INNOVATION

Digital Modeling

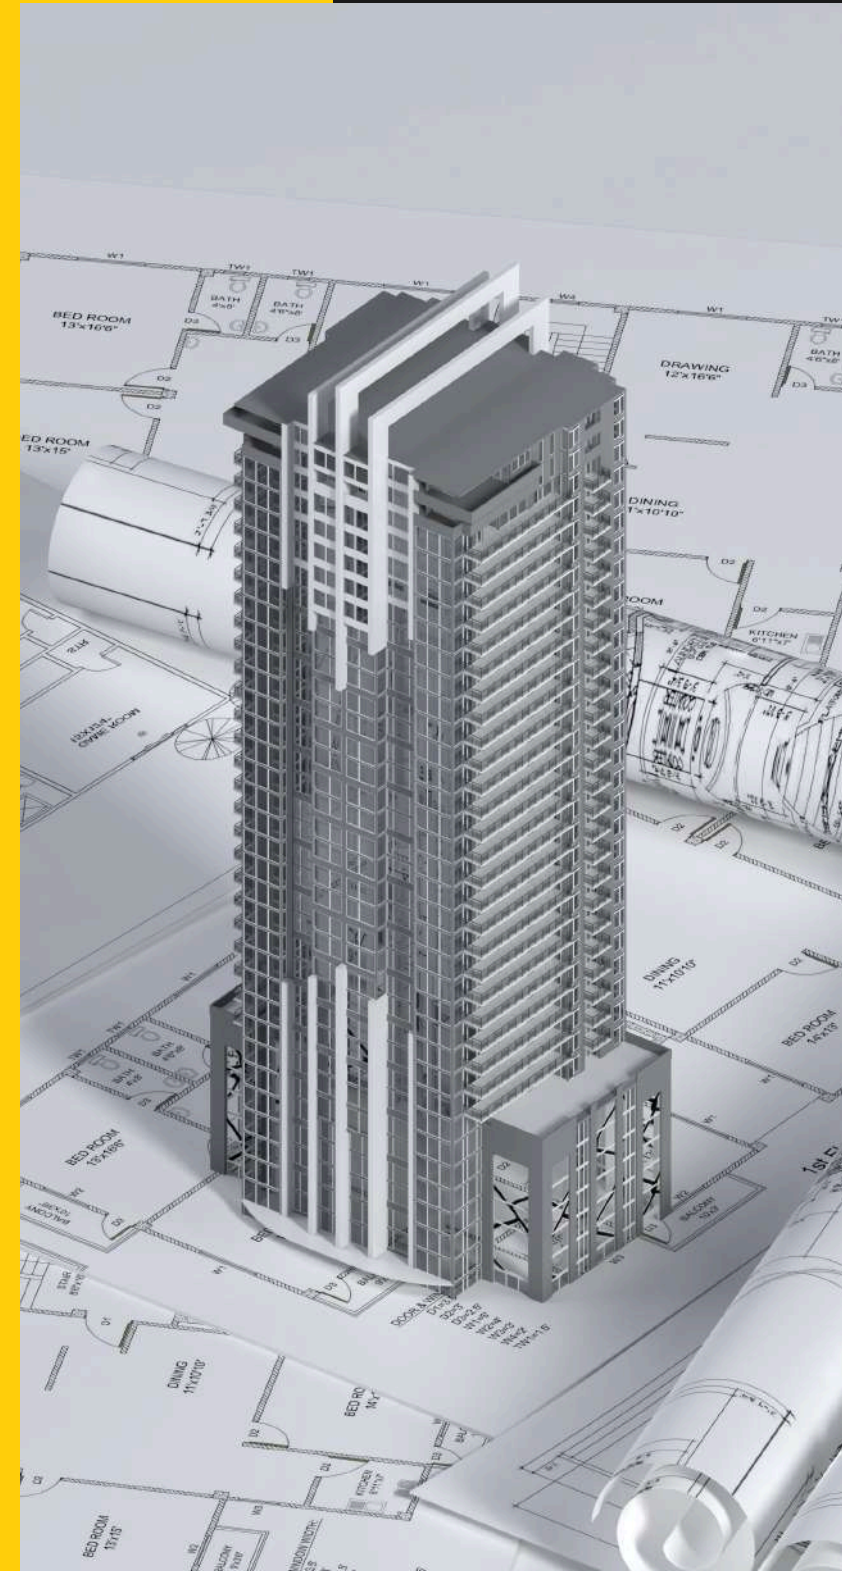

3D Scanning, BIM and 3D simulations for accuracy.

Automation Tools

Drones, robotics, and smart sensors in construction.

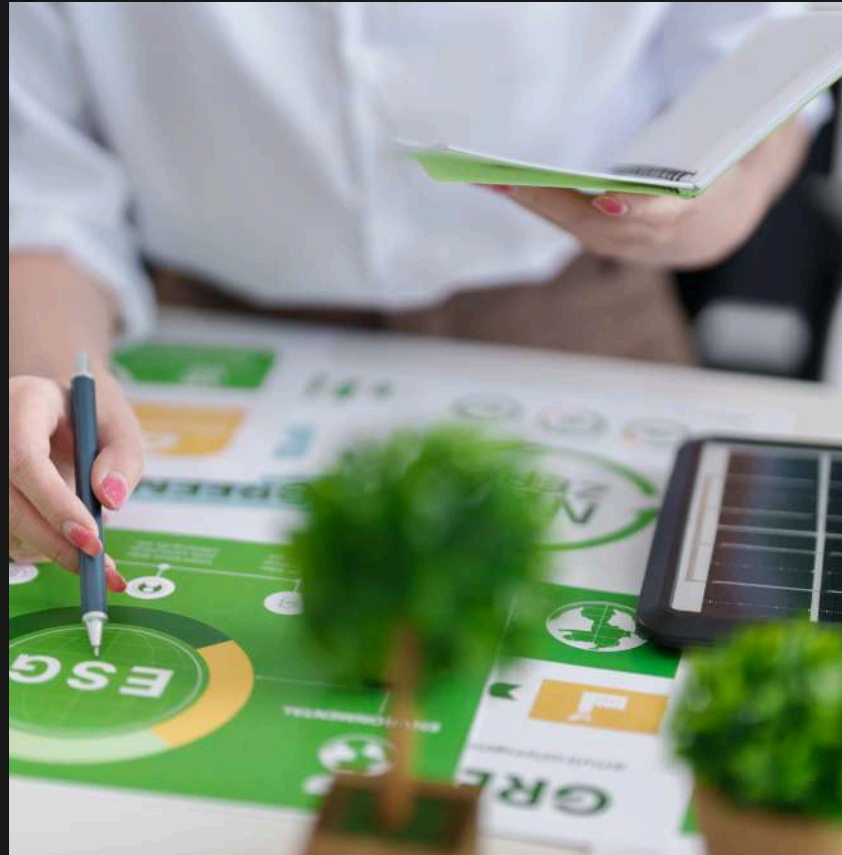

Sustainable Tech

Innovative materials for eco-friendly infrastructure.

We leverage state-of-the-art technologies such as Building Information Modeling (BIM), AI-driven project scheduling, and smart construction monitoring.

This approach allows us to minimize risks, optimize resources, and ensure efficient project delivery with minimal environmental impact.

»» OUR STRENGTHS

- Experienced multidisciplinary team of engineers and technicians
- Cutting-edge technology and industry-compliant standards
- Strong focus on safety, sustainability, and innovation
- Proven track record across mining, industrial, and commercial sectors

INTEGRITY

Upholding transparency and ethical practices

INNOVATION

Leveraging technology for smarter solutions

EXCELLENCE

Delivering quality beyond expectations

SAFETY

Prioritizing people and environment in every project

SUSTAINABILITY

Building solutions for a better future

CONCLUSION / CALL TO ACTION

Our commitment lies in shaping a future where innovation, sustainability, and trust converge. We invite potential partners, clients, and investors to join us in creating infrastructure that stands the test of time.

***“Together,
let’s build the
foundations
of tomorrow.”***
